

# Your Trusted Digital Signing Provider On-The Go

## As Legally Binding as Handwritten Signatures

SigningCloud supports digital signing with certificates issued by recognized Certificate Authorities. These signatures are legally binding in many countries with a digital signature law in place.

## What You See is What You Sign

Back by tamper-proof security (Public Key Infrastructure) and accessible user experience, signers will be able to read the document in its entirety and sign where they are intended to sign with an experience similar to a paper document.

Documents signed are also tamper-evident with a virtual seal to provide absolute certainty on its integrity.

## Anytime, Anywhere, Any Device

With SigningCloud, employees, partners, and customers can digitally sign and send documents anytime, anywhere using any web browser or iOS and Android smartphone.

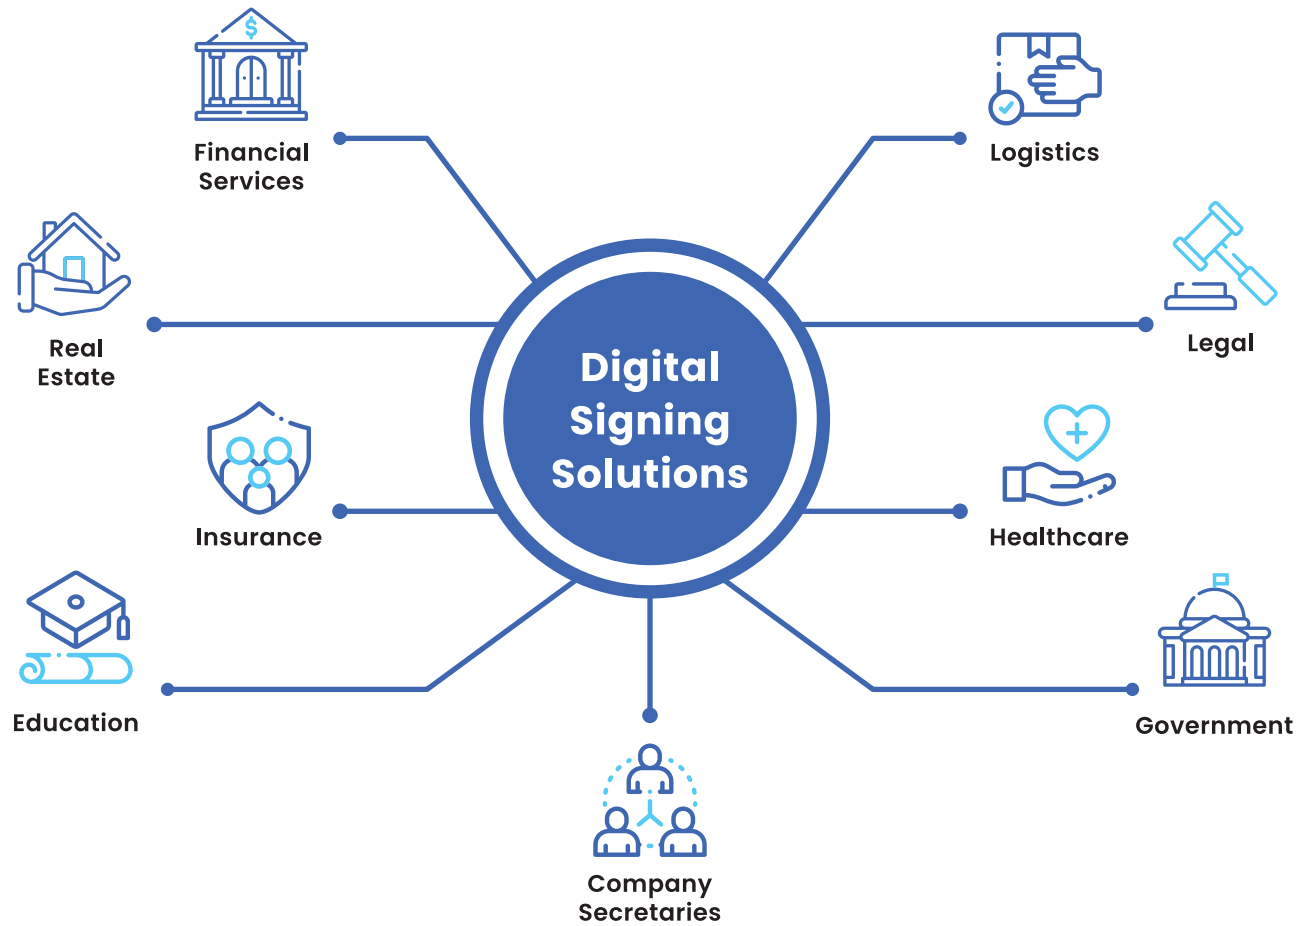

## Doubling Up The Security

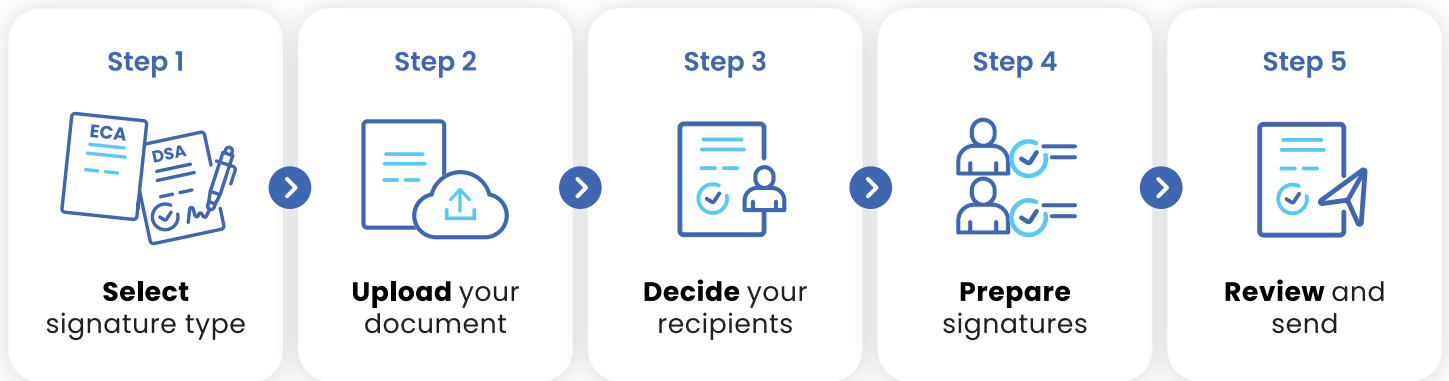

Your document and data security are our top priorities. SigningCloud protects your confidential information by encrypting and making every document tamper-evident. SigningCloud offers multiple two-factor authentication (2FA) options to ensure user credentials during signing.

- > SMS OTP
- > Mobile OTP Token
- > Push Notification

## How SigningCloud Works?

It's that Simple?  
It's **THAT** Simple.
